

Annual Water Report 2011

Date of report

Period of monitoring covered by this report: June 16, 2012

Water supply system operating permit number: 1441048

Location of water supply system: Village of Zeballos

Name of owner(s) Corporation of the Village of Zeballos

Name of contact information for person to contact if anyone has questions regarding this report.

Mike Atchison: Public Works Foreman

During the year 2011 we flushed the system and had all the hydrants service. There are problems with valves not shutting off as they have not been exercised at all. We added a Supervisory Control and Data Acquisition system and battery back power for the reservoir so that during power outages the system will still tell the wells to come on line and we can also turn the wells on remotely by radio or by computer. Also the generator has automatic start up added so as to start the Generator when the power fails which is also on the SCADA system, also door entry, smoke alarm are on the system as well. This will add safety and security to our water system and to our customers.

We also are in the process of locating services and fixing water leaks and working on the valves.

During 2011 we had 3 sample dates of January 24, November 15 and December 12, that the samples did not make the Lab in Vancouver because they were in transit more than 30 hours.

The Village of Zeballos will post this this report on the Village web site.
